RAPIDLY RENEWABLE

It takes around 4.85 hectares of forest to build a typical 93 sqm timber home, but only about 0.4 hectares using bamboo.

Famous for being the fastest growing plant, bamboo is growing in popularity too with architects, designers and builders. When you specify bamboo, you benefit from a substance with the tensile strength of mild steel that is dimensionally superior, flexible, easy to work with and beautiful.

On average, trees take 30-40 years to mature. Bamboo takes just 3 years. This makes it the sustainable option that customers are looking for, especially when we can track materials back to the manufacturer.

FOOD FOR THOUGHT

Our bamboo forests are grown for their tasty bamboo shoots, used in culinary dishes worldwide. To encourage shoot growth, each bamboo pole is cut back every 4-5 years and it is this bi-product we use to manufacture our Zen range.

Wheat is harvested for its kernel and the leftover straw is normally burnt, which harms our environment. We use the waste straw to produce our Strawboard range.

After harvesting coconuts for their flesh and milk, the leftover shells are hand laid by craftsmen to create our Cococraft range.

THE LARGEST RANGE

We have New Zealand's largest range of Zen bamboo products including veneers and bendy plys, panelling, flooring, wallpaper, carpet and mouldings. As well as being able to supply these to order, we are renowned for our ability to build custom products to individual specifications.

NOT JUST BAMBOO

There are a number of things that make Woven Bamboo Enterprises special. Through years of building relationships with the best suppliers, we have developed a culture of innovation and improvement, often spurred on by tailored specifications from architects and designers. Along the way, we've embraced other sustainable materials.

TIME TO GET PERSONAL

We are able to provide you with a range of bamboo and coconut furniture and accessories which you can offer to your clients to personalise their space. Our natural materials offer unique options to add complementary finishing touches to your projects.

CUTTING EDGE

Bamboo provides endless possibilities. To make sure we are ahead of the game, we partner with the most innovative manufacturers creating bespoke products to suit the design, specification and build of projects as diverse as schools, government buildings, universities and hotels.
